## Fractions Policy

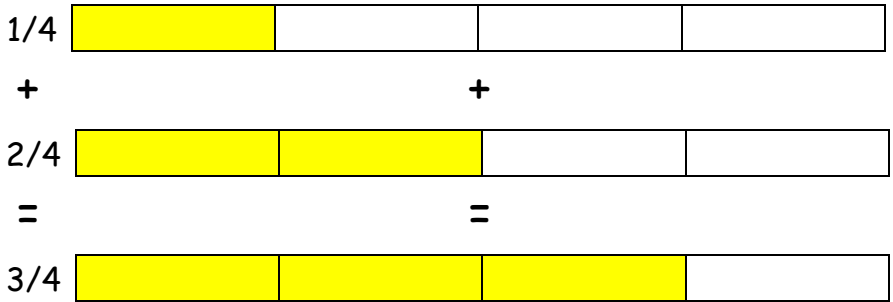

Date written: March 2020

Date to review: March 2022

<u>Year Group</u>	<u>National Curriculum + Aspire Targets</u>	<u>Vocabulary + Strategies</u> <u>Image</u>
Reception		
Stage 1	<p>N/C: recognise, find and name a half as one of two equal parts of an object, shape or quantity</p> <p>N/C: recognise, find and name a quarter as one of four equal parts of an object, shape or quantity</p> <p>Aspire: F7 - I can name and find <math>\frac{1}{4}</math> and <math>\frac{1}{2}</math> of a shape, an object or a quantity of objects</p>	<p><u>Shading fractions of shape</u></p> <p>Shade <math>\frac{1}{2}</math> of this shape yellow.</p>  <p>Shade <math>\frac{1}{4}</math> of this shape yellow</p> 
Stage 2	<p>N/C: recognise, find, name and write fractions <math>\frac{1}{3}</math>, <math>\frac{1}{4}</math>, <math>\frac{2}{4}</math> and <math>\frac{3}{4}</math> of a length, shape, set of objects or quantity</p> <p>F9* - I can find and name <math>\frac{1}{3}</math>, <math>\frac{1}{4}</math>, <math>\frac{2}{4}</math>, and <math>\frac{3}{4}</math> of a length, shape, set of objects or quantity</p>	<p><u>Shading fractions of shape</u></p> <p>Shade <math>\frac{1}{3}</math> of this shape yellow.</p>  <p>Shade <math>\frac{1}{4}</math> of this shape yellow</p>  <p>Shade <math>\frac{2}{4}</math> of this shape yellow</p>  <p>Shade <math>\frac{3}{4}</math> of this shape yellow</p> 
Stage 2	<p>N/C: write simple fractions e.g. <math>\frac{1}{2}</math> of 6 = 3 and recognise the equivalence of two quarters and one half.</p>	<p><u>Recognising simple fractions</u></p> <p>What's a half of 6?</p>

	<p>Aspire: F10 - I can write simple fractions e.g. <math>\frac{1}{2}</math> of 6 = 3 and recognise the equivalence of two quarters and one half.</p>	 <p>Thought Process: For a half, divide the whole number by 2.</p> <p><u>Recognising the equivalence of two quarters and one half</u></p>  
<p>Stage 3</p>	<p>N/C: count up and down in tenths; recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10</p> <p>Aspire: F9 - I can count up and down in tenths</p> <p>Aspire C5: I can show that tenths that arise from dividing a single digit number or a quantity by 10 are represented by a decimal number</p>	<p><u>Place value in decimal numbers</u></p> <p>0.6 looks like:</p>  <p>0 0.1 0.2 0.3 0.4 0.5 0.6 0.7 0.8 0.9 1</p> <p>0.7 looks like:</p>  <p>0 0.1 0.2 0.3 0.4 0.5 0.6 0.7 0.8 0.9 1</p>
	<p>N/C: recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions with small denominators</p> <p>Aspire: F10 - I can recognise, find and write fractions of a discrete set of objects or numbers using fractions with a small denominator or a denominator of 1 and put these in order</p>	<p><u>Fractions of an amount</u></p> <p>Calculate <math>\frac{3}{5}</math> of 20...</p>  <p>Thought process: there are 2 steps...</p> <ol style="list-style-type: none"> <li>1. Divide the given amount by the denominator, <span style="float: right;">(20 ÷ 5 = 4)</span></li> <li>2. Multiply the answer by the numerator <span style="float: right;">(4 × 3 = 12)</span></li> </ol>
<p>Stage 3</p>	<p>N/C: add and subtract fractions with the same denominator within one whole (e.g. <math>\frac{5}{7} + \frac{1}{7} = \frac{6}{7}</math>)</p>	<p><u>Adding fractions with the same denominator</u></p>

	<p>Aspire: F11 - I can add and subtract fractions with the same denominator within one whole (e.g. <math>5/7 + 1/7 = 6/7</math>)</p>	<p><math>1/4 + 2/4</math></p>  <p>Thought Process: As long the denominators are the same, you can add or subtract the numerators.</p>
	<p>N/C: recognise and show, using diagrams, equivalent fractions with small denominators</p> <p>Aspire: C7 - I can recognise and show, using diagrams, equivalent fractions with small denominators</p>	<p><u>Equivalent fractions</u></p> <p>Find equivalent fractions to <math>2/5</math></p>  <p>Take each fifth and split them into two pieces</p>  <p><math>4/10</math> is therefore equivalent to <math>2/5</math></p> <p>Thought Process: Find equivalent fractions: identify the common denominator, using knowledge of multiples and multiply the numerator by the factor used to find the common denominator, which will be different for both fraction.</p>
<p>Stage 4</p>	<p>N/C: recognise and show, using diagrams, families of common equivalent fractions</p>	<p><u>Equivalent fractions</u></p>  <p>1 whole</p>

Aspire: F9 - I can recognise show and name, using diagrams, families of common equivalent fractions including tenths and hundredths

N/C: recognise and write decimal equivalents of any number of tenths or hundredths

Aspire: F10\* - I can count up and down in hundredths

Aspire: C6\* - I can recognise that hundredths arise when dividing an object by a hundred and dividing tenths by ten.

Place value in decimal numbers

0.6 looks like:

0 0.1 0.2 0.3 0.4 0.5 0.6 0.7 0.8 0.9

0.7 looks like:

0 0.1 0.2 0.3 0.4 0.5 0.6 0.7 0.8 0.9

Let's zoom in, 0.62 would look like so - it's larger than 6 but smaller than 7...

0.5 0.6 0.7 0.8

0 . 6 2

0 Ones . 6 tenths 2 hundredths

Stage 4

N/C: recognise and write decimal equivalents to 1/4, 1/2, and 3/4

Fractions to decimals and vice versa

1/2 = 0.5

Aspire: F11\* - I can recognise and write decimal equivalents of  $\frac{1}{4}$ ,  $\frac{1}{2}$  and  $\frac{3}{4}$ ,  $\frac{n}{10}$  and  $\frac{n}{100}$

$3/10 = 0.3$

$2/5 = 0.4$

Thought process: Divide the denominator by the numerator.  
 $1/2$  as a decimal =  $2 \div 1 = 0.5$

N/C: round decimals with one decimal place to the nearest whole number

Aspire: F12\* - I can round decimals with one decimal place to the nearest whole number

Place value in decimal numbers - Rounding

0.7 rounded to the nearest whole number...

Thought process: we can only go to the nearest whole numbers; here they are 0 and 1. We need to remember the rule for rounding. An easy rhyme to remember;

1, 2, 3, 4 - down to the floor. 5, 6, 7, 8, 9, - up we climb.  
 (rounding down) (rounding up)

0.7 rounded to the nearest whole number... "5, 6, 7, 8, 9 - up we climb," we therefore will round up to 1; our nearest whole number.

<p>Stage 4</p>	<p>N/C: add and subtract fractions with the same denominator</p> <p>C8 - I can add and subtract fractions with the same denominator</p>	<p><u>Adding fractions with the same denominator</u></p> <p><math>1/4 + 2/4</math></p> <p>1/4 </p> <p>+</p> <p>2/4 </p> <p>=</p> <p>3/4 </p> <p>Reverse for subtraction</p>
<p>Stage 5</p>	<p>N/C: add and subtract fractions with the same denominator and multiples of the same number.</p> <p>Aspire: C8* - I can add and subtract fractions with the same denominator and related fractions including writing mathematical statements that exceed 1 as a mixed number: (e.g. <math>2/5 + 4/5 = 6/5 = 1\frac{1}{5}</math>)</p>	<p><u>Adding fractions with different denominators</u></p> <p><math>1/3 + 2/4</math></p> <p>1/3 </p> <p>+</p> <p>2/4 </p> <p>We need find a common denominator that appears in both multiplication tables...12. Split two bars into 12</p> <p><math>1/3 + 2/4</math> becomes <math>4/12 + 6/12</math></p> <p>4/12 </p> <p>+</p> <p>6/12 </p> <p>= 10/12</p> <p></p>

Stage 5	<p>N/C: recognise the percent symbol (%) and understand that percent relates to "number of parts per hundred", and write percentages as a fraction with denominator hundred, and as a decimal fraction</p> <p>Aspire: F16* - I can write simple fractions as percentages and decimalized percentages (e.g. <math>\frac{1}{2} = 50\% = 0.5</math>)</p>	<p><u>Fractions to decimals to percentages</u></p> <p><math>\frac{1}{2} = 0.5 = 50\%</math></p>  <p>0    0.5    1 0%    50%    100%</p> <p><math>\frac{3}{10} = 0.3 = 30\%</math></p>  <p>0   0.1   0.2   0.3   0.4   0.5   0.6   0.7   0.8   0.9   1 0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100%</p> <p><math>\frac{2}{5} = 0.4 = 40\%</math></p>  <p>0    0.2    0.4    0.6    0.8    1 0%    20%    40%    60%    80%    100%</p> <p>Thought process: Divide the denominator by the numerator and multiply by 100</p> <p style="text-align: center;"><math>\frac{1}{2}</math> as a decimal = <math>2 \div 1 = 0.5 \times 100 = 50\%</math></p>
	<p>N/C: recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements</p> <p>Aspire: F13 - I can recognise mixed numbers and improper fractions and convert from one form to the other</p>	<p><u>Mixed numbers to improper fractions and vice versa</u></p> <p>Convert <math>2\frac{1}{3}</math> into an improper fraction.</p>  <p>Convert these now into thirds, how many thirds are there?</p>  <p>= <math>\frac{7}{3}</math></p>

		<p>Thought process: Multiply the whole number by the denominator, to find the improper fraction for the whole number and then add the extra numerators.</p> <p>e.g. <math>2 = 6/3 + 1/3 = 7/3</math></p>
--	--	--

Stage 6	F8: I can use common factors to simplify fractions and use common multiples to express fractions in the same denomination	<p>Thought Process:</p> <p>Use knowledge of multiplication tables to identify common factors to simplify fractions.</p>
	F9*: I can compare and order any fraction, including fractions >1	<p>Thought Process: To order fractions, first find equivalent fractions with a common denominator:</p> <ul style="list-style-type: none"> <li>• Use knowledge of multiplication tables to identify common denominators (multiples).</li> <li>• Identify the factor with which to calculate the common denominator and then multiply the numerator by the same factor.</li> <li>• Order on a number line</li> <li>• Return to original fractions.</li> </ul>

	<p>F12: I can use percentages for comparison and calculate percentages of whole numbers or measures such as 15% of 360</p> <p>:all steps in fraction policy please</p>	<p>Thought Process: To find a percentage of given amount:</p> <ul style="list-style-type: none"> <li>• Convert the percentage into a fraction</li> <li>• Divide amount given by denominator</li> <li>• Multiply answer by numerator</li> </ul>
	<p>F13* - I can recall and use equivalences between simple fractions, decimals and percentages including in different contexts</p>	<p>Thought Process:</p> <ul style="list-style-type: none"> <li>• To convert fractions to decimals: numerator divided by the denominator</li> <li>• To convert decimals to a percentage: multiply the decimal by 100</li> <li>• Convert decimals to fractions: Identify the place value of tenths, hundredths or thousandths.</li> </ul>
<p>+</p>	<p>C2 - I can calculate decimal fraction equivalents (e.g. 0.375) for a simple fraction (e.g. <math>\frac{3}{8}</math>) and explain how I've done it</p>	<p>Thought Process:</p> <ul style="list-style-type: none"> <li>• Convert decimals to fractions e.g. 0.375:</li> <li>• Identify the place value of tenths, hundredths or thousandths. E.g. 1000</li> <li>• Record digits of the decimal as the numerator: 375/1000</li> <li>• Convert to its simplest form e.g. <math>\frac{3}{8}</math></li> </ul>
	<p>C3 - I can add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions</p>	<p><u>Adding fractions with different denominators</u></p> <p><math>\frac{1}{3} + \frac{2}{4}</math></p> <p><math>\frac{1}{3}</math> </p> <p>+</p> <p>+</p>

		<p><math>2/4</math> </p> <p>We need find a common denominator that appears in both multiplication tables...12. Split two bars into 12</p> <p><math>1/3 + 2/4</math> becomes <math>4/12 + 6/12</math></p> <p><math>4/12</math> </p> <p>+</p> <p><math>6/12</math> </p> <p style="text-align: center;">= <math>10/12</math></p> <p></p>
	<p>C4: I can multiply simple pairs of proper fractions, writing the answer in its simplest form (e.g. <math>\frac{1}{4} \times \frac{1}{2} = 1/8</math>)</p>	<p>Thought Process:</p> <ul style="list-style-type: none"> <li>• Multiply the numerator of each fraction</li> <li>• Multiply the denominator of each fraction</li> <li>• Simplify fractions using common factors</li> </ul>
	<p>C5: I can divide proper fractions by whole numbers (e.g. <math>\frac{1}{3} \div 2 = 6</math>)</p>	<p>Thought Process:</p> <ul style="list-style-type: none"> <li>• When dividing fraction by whole number e.g. <math>\frac{1}{4} \div 4</math></li> <li>• Convert whole number into a fractions= <math>\frac{1}{4} \div \frac{4}{1} =</math></li> <li>• Upturn the second fraction (this is now a <a href="#">reciprocal</a>) and then</li> </ul>

		<p>multiply</p> $\frac{1}{4} \times \frac{1}{4} = \frac{2}{16}$ <ul style="list-style-type: none"><li>• Finally simplify to its lowest form = <math>\frac{1}{8}</math></li></ul>
