

Science Newsletter Autumn 2021

We have really enjoyed being scientists this term.

Does changing the place where the bread is, change the amount of mould grown?

Lots of fun making and testing parachutes.

Upper Key Stage 2

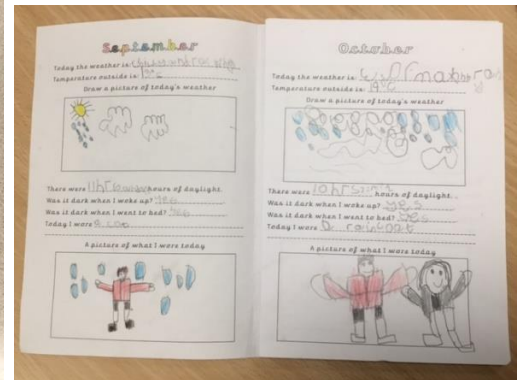

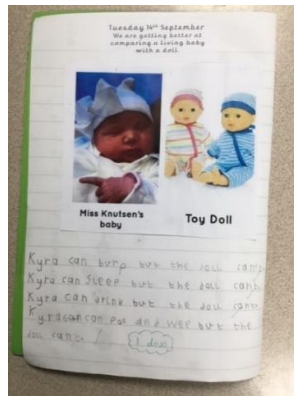

Magnets are amazing!

Which chocolate melts fastest? We want to make cakes quickly!

Lower Key Stage 2

When you want to compare a live baby and a doll, it's always useful if there's a teacher on maternity leave to bring in their baby.

We will track seasonal change all through this year.

Key Stage 1

In EYFS, we're understanding more about the world, both close at hand and far away. It gives us great reasons to count and write!

Early Years Foundation Stage

Highlights still to come include:

- The Hive children being bright sparks and learning about electricity.
- Lots of learning about light, which will cheer up these dark days.
- Learning different ways to separate mixtures, could we survive on a desert island if we needed to purify our drinking water?
- Using our outside areas to find out about freezing and melting.
- Using our senses and being inspired by some of our amazing paralympians.
