

Geography Policy 2022 - 2023 St. Michael in the Hamlet Primary School

Intent

At St Michael in the Hamlet we believe that Geography helps to provoke and provide answers to questions about the natural and human aspects of the world. Children are encouraged to develop a greater understanding and knowledge of the world, as well as their place in it. The geography curriculum at St Michael in the Hamlet enables children to develop knowledge and skills that are transferable to other curriculum areas and which can and are used to promote their spiritual, moral, social and cultural development. Geography is, by nature, an investigative subject, which develops and understanding of concepts, knowledge and skills. We seek to inspire in children a curiosity and fascination about the world and its people which will remain with them for the rest of their lives; to promote the children's interest and understanding of diverse places, people, resources and natural and human environments, together with a deep understanding of the Earth's key physical and human processes. The curriculum is designed develop knowledge and skills that are progressive, as well as transferable, throughout their time at St Michael in the Hamlet and also to their further education and beyond.

Implementation

Geography at St Michael in the Hamlet is taught in mini-blocks throughout the year in Topic work, so that children can achieve depth in their learning. Teachers have identified the key knowledge and skills of each blocked topic and consideration has been given to ensure progression across topics throughout each year group across the school. At the beginning of each topic, children are able to convey what they know already as well as what they would like to find out. This informs our bespoke programme of study and also ensures that lessons are relevant and take account of children's different starting points. Consideration is given to how greater depth will be taught, learnt and demonstrated. Cross curricular outcomes in geography may be planned with links between geography and morning literacy lessons identified, planned for and utilised where appropriate. The local area is fully utilised to achieve the desired outcomes, with extensive opportunities for learning outside the classroom embedded in practice.

Teaching and Learning

Through their work in geography, children learn about their local area and compare their life in this area with that in other regions in the United Kingdom and in the rest of the world. As pupils progress, they deepen their understanding of the interaction between physical and human processes, and of the formation and use of landscapes and environments. They learn how to draw and interpret maps and use subject-specific vocabulary relating to human and physical geography, with accuracy and confidence. Through their growing knowledge and understanding of human geography, children gain an appreciation of life in different societies, helping to develop a sense of other cultures, and how nations rely on each other. Geographical knowledge, understanding and skills provide the framework and approaches that explain how the Earth's features at different scales are shaped, interconnected and change over time.

The learning intention for each lesson is informed by the National Curriculum and children are guided towards this within each lesson through the use of success criteria.

We are

Safe, Motivational, Inclusive, a Team and Happy

Teaching and learning in geography is supported by a wealth of resources, including specific online platforms, such as Twinkl, Focus and Espresso. Outdoor learning is planned for and progressive throughout the school and programmes of work are embedded with key knowledge, which itself has been mapped, along with key skills, to support affective assessment and ensure progression across the school.

Organisation

Within the academic year, children study geography in blocks, as part of agreed Topics. This allows children to enhance their geographical knowledge and develop their geographical skills through focused learning, throughout the duration of each block within a Topic. This model also promotes the children in being able to achieve a greater depth of understanding of each topic.

EYFS

Early Years explore geographical themes and content through the Understanding of the World strand of the EYFS curriculum. This involves guiding the children to develop sense of their physical world, as well as their community, through opportunities to explore, observe and find out about people, places, technology and the environment. They are assessed according to agreed national targets.

Key Stage 1 and Key Stage 2

During Key Stage 1 pupils will investigate their local area and a contrasting area in the United Kingdom or abroad, finding out about the environment in both areas and the people who live there. They also begin to learn about the wider world. They carry out geographical enquiry inside and outside the classroom. In doing this, they ask geographical questions about people, places and environments, and use geographical skills and resources such as maps and photographs.

During Key Stage 1 pupils should develop knowledge about the world, the United Kingdom and their local area. They should understand basic subject-specific vocabulary relating to human and physical geography and begin to use geographical skills, including first-hand observation, to enhance their locational awareness.

Children will develop their **locational knowledge**; they will learn to name and locate the world's seven continents and five oceans. In addition, they will learn to name, locate and identify the characteristics of the four countries and capital cities of the United Kingdom and its surrounding seas.

They will also develop a greater **understanding of place** by comparing the geographical similarities and differences through studying the human and physical geography of a small area of the United Kingdom, and of a small area in a contrasting non-European country. The specific geographical locations selected for these comparisons will be selected to link to other areas of the curriculum to allow for cross-curricular work and development.

In addition to developing children's locational and place knowledge, they will have the opportunity to learn about **human and physical geography**. During this study, they will identify seasonal and daily weather patterns in the United Kingdom and the location of hot and cold areas of the world in relation to the Equator and the North and South Poles. They will also begin to use geographical vocabulary to refer to key physical features (beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley, vegetation, season and weather) and key human features (city, town, village, factory, farm, house, office, port, harbour and shops.)

We are
Safe, Motivational, Inclusive, a Team and Happy

Children will develop **geographical skills and fieldwork skills**, through these three areas of study, where they learn to use world maps, atlases and globes; simple compass directions; aerial photographs and plan perspectives to recognise landmarks and basic human and physical features and to use simple fieldwork and observational skills to study the geography of their local area.

During Key Stage 2 Pupils extend and develop their knowledge and understanding beyond the local area to include the United Kingdom and Europe, North and South America; studying the location and characteristics of a range of the world's most significant human and physical features. They continue to develop their use of geographical knowledge, understanding and skills to enhance their locational and place knowledge.

They extend their **locational knowledge** when they learn to locate and name European countries as well as North and South America countries, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities. In addition to this, they extend their locational knowledge to be able to name and locate counties and cities of the United Kingdom, describing key geographical regions, human and physical characteristics, key topographical features and land-use patterns. This is further extended to identify the position and significance of latitude, longitude, the Equator, the Northern and Southern Hemispheres, the Tropics of Cancer and Capricorn, the Arctic and Antarctic Circle and the Greenwich Meridian and time zones.

They will build on their **understanding of place** by comparing the geographical similarities and differences through studying the human and physical geography of a region of the United Kingdom, a region of a European country and a region within North or South America.

In Key stage 2 **human and physical geography** knowledge is extended to allow children to develop an understanding of aspects of physical geography (investigating climate zones, biomes and vegetation belts, rivers, mountains, volcanoes and earthquakes, and the water cycle) and human geography (learning about types of settlement and land use, economic activity and the distribution of natural resources including energy, food, minerals and water).

Children will continue to develop **geographical skills and fieldwork skills**, through these three areas of study, where they learn to use maps, atlases and globes and digital/computer mapping; eight-point compass directions; four and six-figure grid references, symbols and keys and the Ordnance Survey maps. They will also use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.

Equal Opportunities

At St Michael in the Hamlet, we are committed to providing a teaching environment which ensures all children are provided with the same learning opportunities regardless of social class, gender, culture, race, special educational need or disability. Teachers use a range of strategies to ensure inclusion and also to maintain a positive ethos where children demonstrate positive attitudes towards others.

Support for specific individuals is considered and planned for, with thought given to how greater depth and further challenge can be provided for and demonstrated by children who require further challenge.

We are
Safe, Motivational, Inclusive, a Team and Happy

Inclusion

All pupils are entitled to access the geography curriculum at a level appropriate to their needs.

We will endeavour to ensure inclusion by teachers using a range of strategies in line with the school's inclusive ethos. Independent tasks, as well as teaching, are also well-adapted to ensure full accessibility, as well as to provide appropriate challenge to different groups of learners.

The school makes full use of additional adults who are deployed effectively to ensure that identified children are able to make progress in each curriculum area wherever possible, according to their potential.

Opportunities for enrichment are also fully utilised, to ensure a fully inclusive and engaging geography curriculum and this is supported through a number of links with places of geographical interest in the immediate and wider locality and regular projects which engage the children further through practical learning activities.

Impact

Outcomes in topic and literacy books may evidence a broad and balanced geography curriculum and demonstrate children's acquisition of identified key knowledge. Children review their successes in achieving objectives at the end of sessions where appropriate. Children also record what they have learned comparative to their starting points at the end of every topic. As children progress throughout the school, they develop a deeper knowledge, understanding and appreciation of their local area and its place within the wider geographical context. Geographical understanding, as well as children's spiritual, moral, social and cultural development is further supported by the school's links with our international partner school. This aspect of the work of the school is also supported through specific drives which may include cultural investigations, focussing on inclusion and diversity (with links to history) and 'food tasting' in which they learn the origins of dishes prepared and contributed by the school community in a celebration of the school's cultural diversity. Children are able to learn about careers related to geography from discussions in class and by meeting members of our community in diverse settings during organised trips.

Assessment

Assessment for learning is continuous throughout the planning, teaching and learning cycle. Key geographical knowledge is taught to enable and promote the development of children's geographical skills. Assessment is supported by use of the following strategies:

- Observing children at work, individually, in pairs, in a group and in class during whole class teaching and by using Balance to assess outcomes.
- Using differentiated, open-ended questions that require children to explain and unpick their understanding.
- Providing effective feedback, including interactive marking to engage children with their learning and to provide opportunities for self-assessment, consolidation, depth and target setting.
- Book moderation and monitoring of outcomes of work, to evaluate the range and balance of work and to ensure that tasks meet the needs of different learners,

We are
Safe, Motivational, Inclusive, a Team and Happy

with the acquisition of the pre-identified key knowledge of each topic being evidenced through the outcomes.
